# HEART TEAM SUMMIT

A Heart Team is now a standard treatment approach for complex cardiovascular patients. The Heart Team consists of cardiologists, cardiac surgeons, nurses and other health care specialists. This includes regular meetings to make consensus treatment recommendations for conditions including obstructive coronary artery disease and valvular heart conditions. This meeting will provide expert lectures and case presentations geared toward health care professionals who may be part of a Heart Team. Also will provide the latest innovations as well as standard treatments, including transcatheter valvular heart therapies and coronary revascularization strategies.

## LEARNING OBJECTIVES

After this activity, participants will be able to:

1. Describe the concept of the Heart Team, including the key components and functionality
2. List transcatheter options to address heart valve pathology including aortic, mitral, tricuspid and pulmonic stenosis and regurgitation
3. Describe the latest interventional techniques and therapies for structural heart disease and congenital heart disease
4. Apply various diagnostic technologies including echocardiography, CT, and CMR to guide management of valvular heart disease
5. Discuss the various tools to assist a patient in cardiogenic shock
6. Describe available and emerging technologies to manage the left atrial appendage and how it can mitigate stroke
7. Summarize the latest developments in coronary revascularization
8. Describe various techniques to treat complex pathology such as left main, bifurcation disease, and calcified lesions with surgical and catheter based therapies
9. List the latest recommendations for management of CTOs to optimize procedural success while minimizing complications
10. Review the variety of percutaneous ventricular support devices and clinical scenarios best suited for each device
11. Summarize lessons learned from case presentations
12. Discuss the treatment differences and the variation in clinical outcomes in special patient populations
13. Discuss the multidisciplinary care of the pregnant patients with acquired or congenital heart disease
