20th Annual Highlights of Recent Scientific Liver Meetings: Impact on Clinical Practice

Course Director: Alfred L. Baker, MD

New information on the diagnosis and management of patients with liver disease is being gathered at an accelerating rate. It is difficult for the busy practitioner to separate the novel but unproven idea from information that has a direct impact on daily practice. The hepatitis C epidemic is an example of such conflicting demands, with the physician called to address the immediate needs of patient care while extensive new information is being constantly generated.

This educational program is focused toward health-care professionals involved in the care of patients with liver disease. In a five-hour session, important information presented at the recent meeting of the American Association for the Study of Liver Diseases will be reviewed. Nine areas of clinical hepatology will be covered and potential changes in patient management will be discussed. Our guest speaker, **Carl Berg, MD, Professor of Medicine at Duke University School of Medicine**, will join the informal and interactive discussion.

After attending this educational activity, participants should be able to:

- 1) Explain the newest data for the diagnosis and treatment of major liver disorders.
- 2) Describe approved therapy for Hepatitis C, Hepatitis B, and other common liver disorders.
- 3) Review guidelines for patients with complex liver disorders, such as Hepatitis C, and for those requiring liver transplantation.
