Second Annual Review of Recent Scientific Nephrology Meetings: Impact on Clinical Practice

Course Directors: Michael M. Abecassis, MD, MBA, and John J. Friedewald, MD

New information on the diagnosis and management of patients with chronic kidney disease is being gathered at an accelerating rate. It is difficult for the busy practitioner to separate the novel but unproven idea from information that has a direct impact on daily practice. In this informal and interactive session, important information presented at the recent meeting of the American Society of Nephrology will be reviewed. Nine areas of clinical nephrology will be covered and potential changes in patient management will be discussed.

After attending this educational activity, participants should be able to:

- 1) Describe the role of FGF23 in the progression of cardiovascular disease and its links to CKD progression.
- 2) Review the emerging role of home dialysis and frequent dialysis therapies in improving outcomes in ESRD.
- 3) Discuss the approach to the timing of dialysis access and the new techniques available to patients and providers.
- 4) Identify patients with glomerulonephritis that will benefit from more aggressive immunosuppressive therapy and how to approach maintenance therapy.
- 5) Define the latest recommendations for blood pressure control in different age groups and patients with CKD.
- 6) Explain the indications for immunosuppression conversion in kidney transplant recipients.
